Manuel Dätwyler
Product Management infra3D

inspiring

innovative

unique

simplify

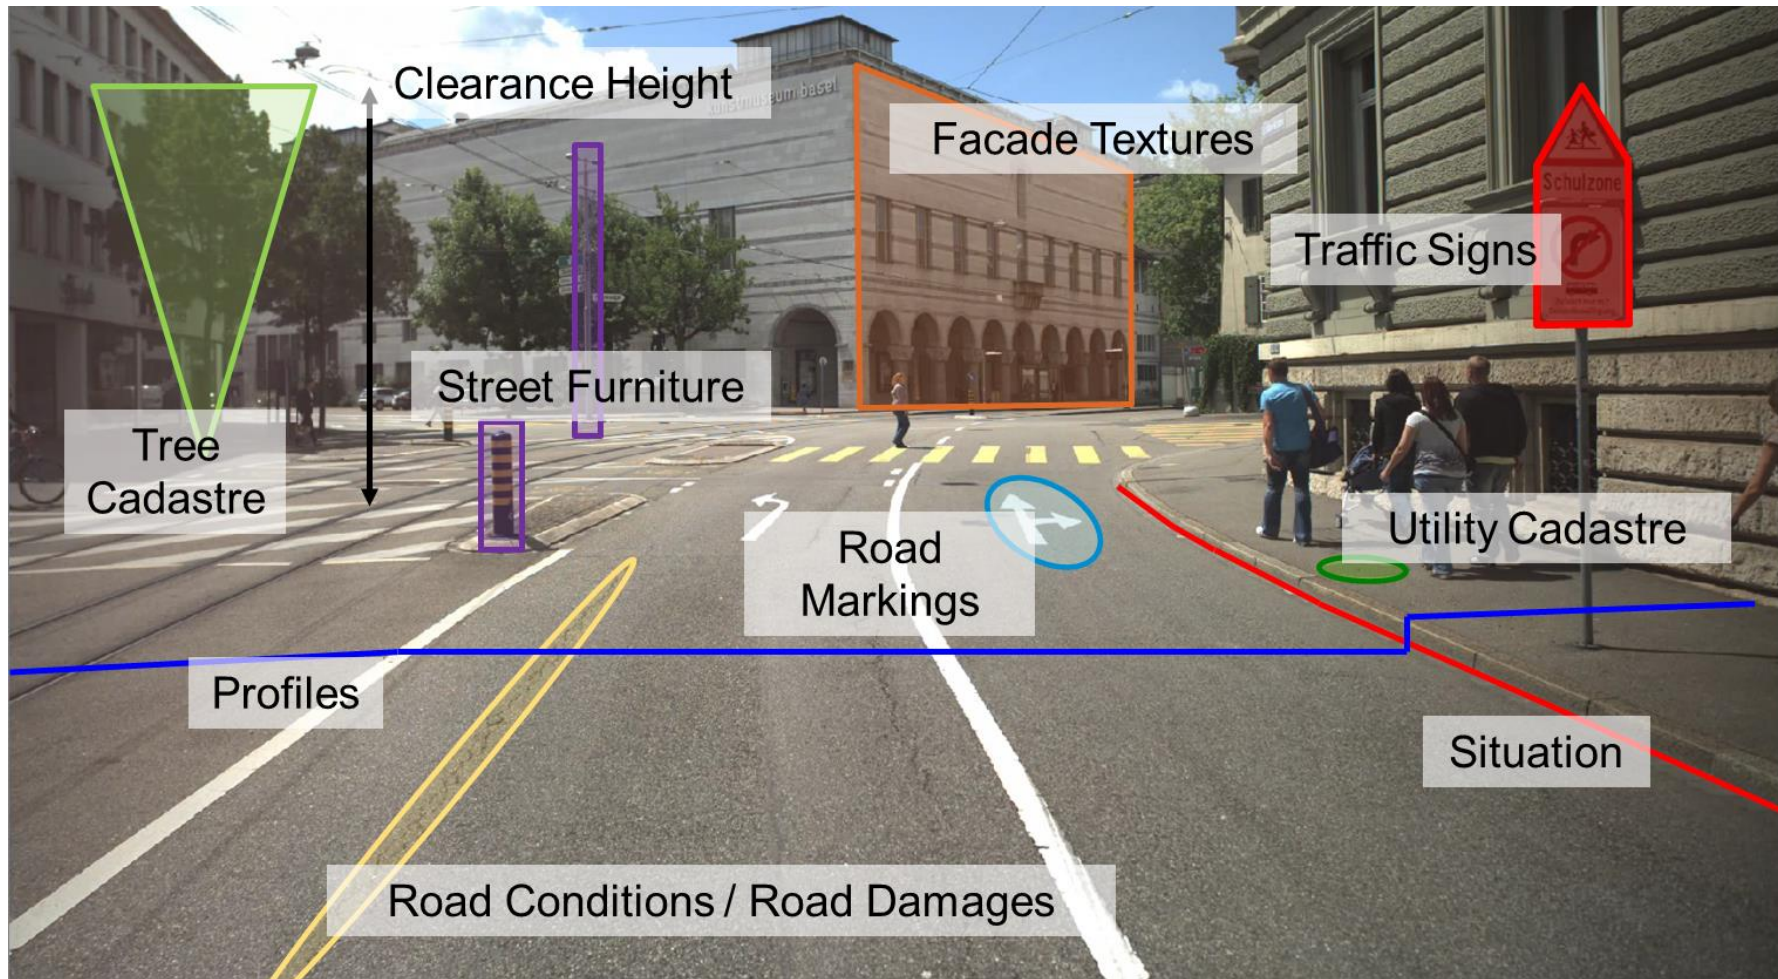

What's the issue?

«cost-intensive infrastructure management»

What are your subjects in road infrastructure?

«highly detailed and accurate 3D-representation of road and rail corridors»

Agenda

«What's it all about»

- Vision & basics
- Technology
 - Acquisition system
 - Infrastructure platform
- Live Demo
- Use cases
 - Virtual site inspection
 - Project planning
 - Mapping and inventory
 - Analysis of pavement condition
 - Picture documentary
 - Project communication
- Conclusion

Vision & basics

Our Vision

«immerse infrastructure»

analyse

visualize

collect spatial data

measure

...easy and direct
from your desktop

infra3D provides a highly detailed and accurate 3D representation of road and rail corridors directly on your workstation.

Our Vision

«envisioning infrastructure in an intuitive way»

Infrastructure management by iNovitas AG:

simple to use for everyone

cost-effective

useful for wide range of applications

**for all types of infrastructure
(road, rail, tram, etc.)**

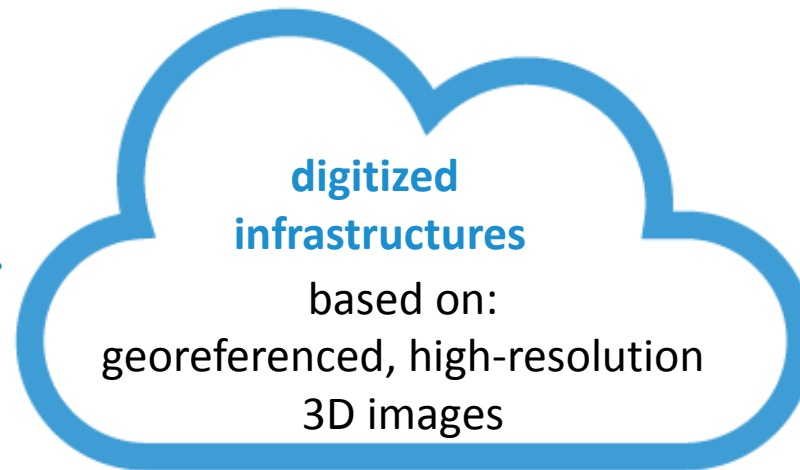

infra3D basics: digitizing and web based use

digitizing

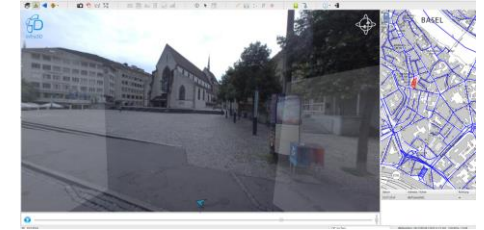

- stereo images
- panoramic images
- LiDAR
- ...

infra3D platform

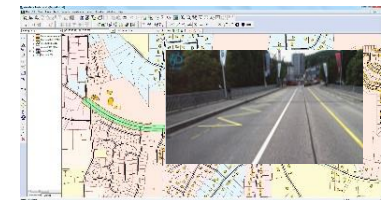

shared use

infra3D web client
(SaaS)

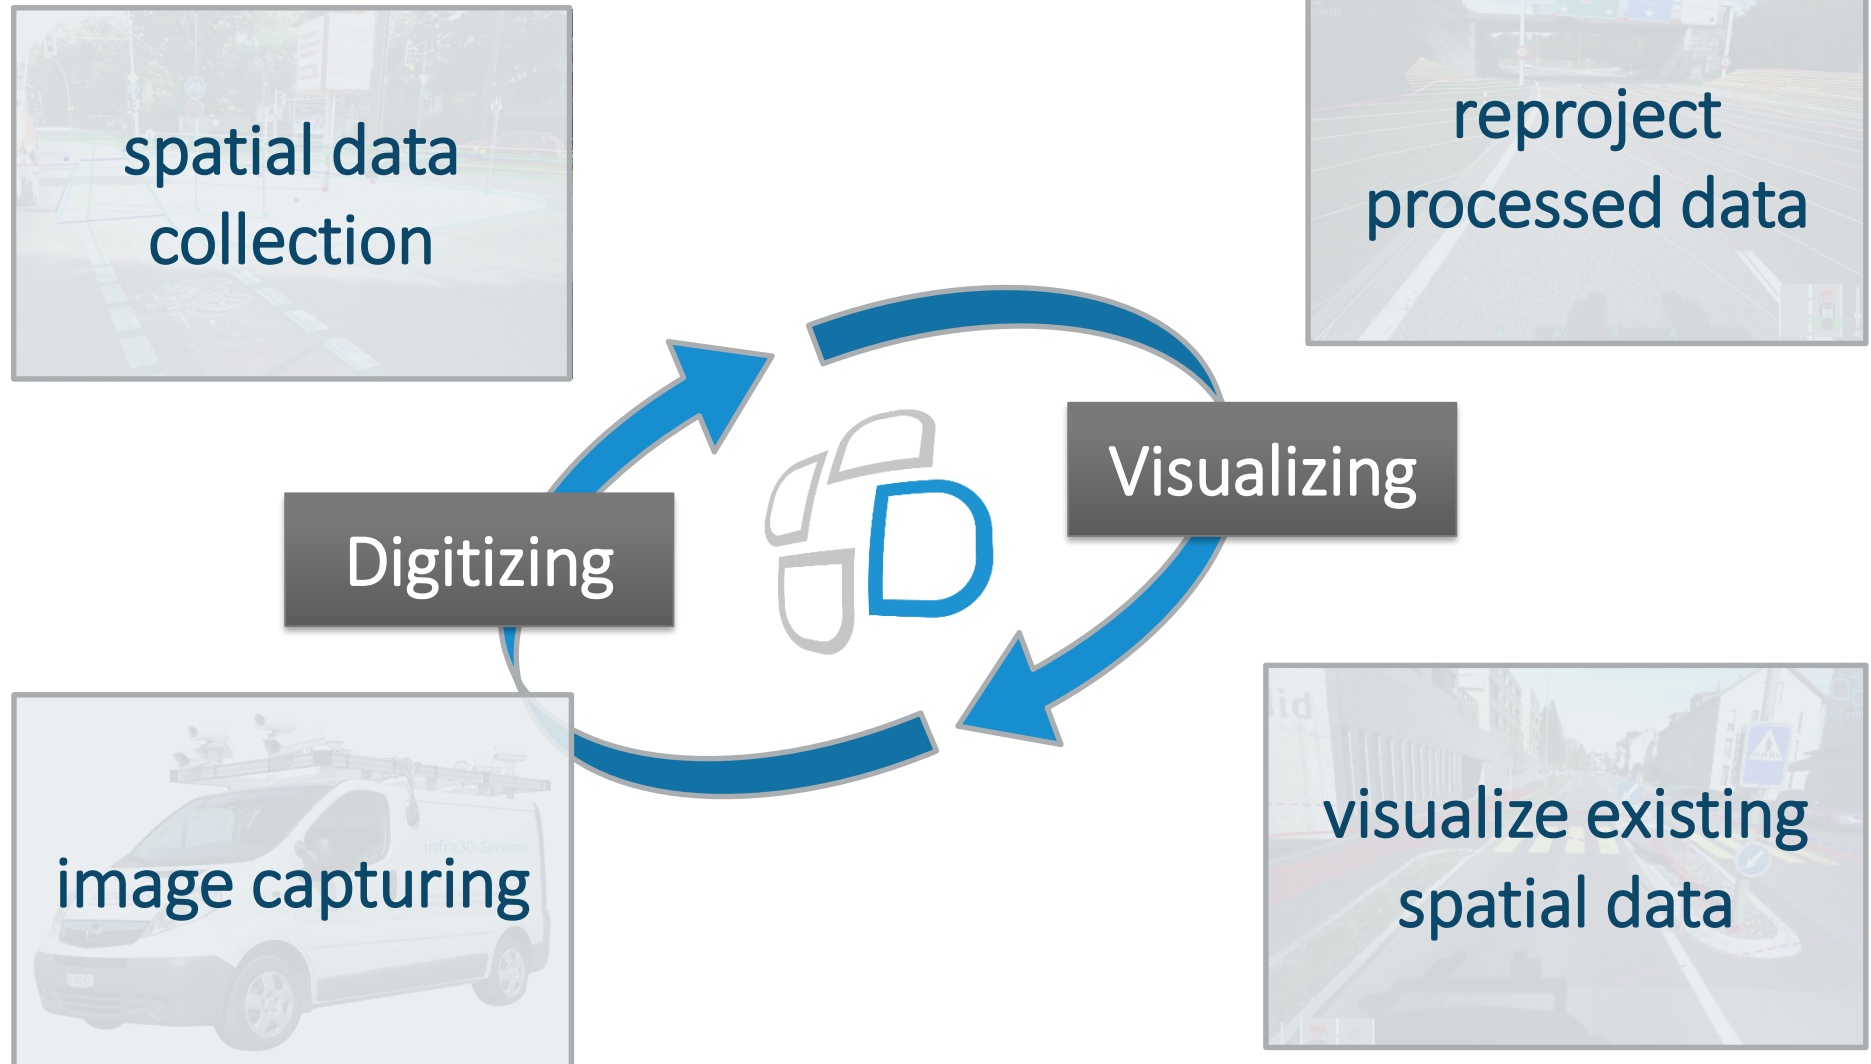

infra3D web services
(PDaaS)

infra3D programming
interfaces

infra3D basics: digitizing and visualizing

«envisioning infrastructure in an intuitive way»

infra3D Technology

image acquisition

infra3D technology

«recording system»

Navigation System

GNSS, IMU

Recording sensors

- 11MP cameras
- Spherical cameras
- HD cameras
- LiDAR sensors

Controllers

Computer, SyncBox, acquisition software

System calibration

infra3D technology

«platform independent recording system»

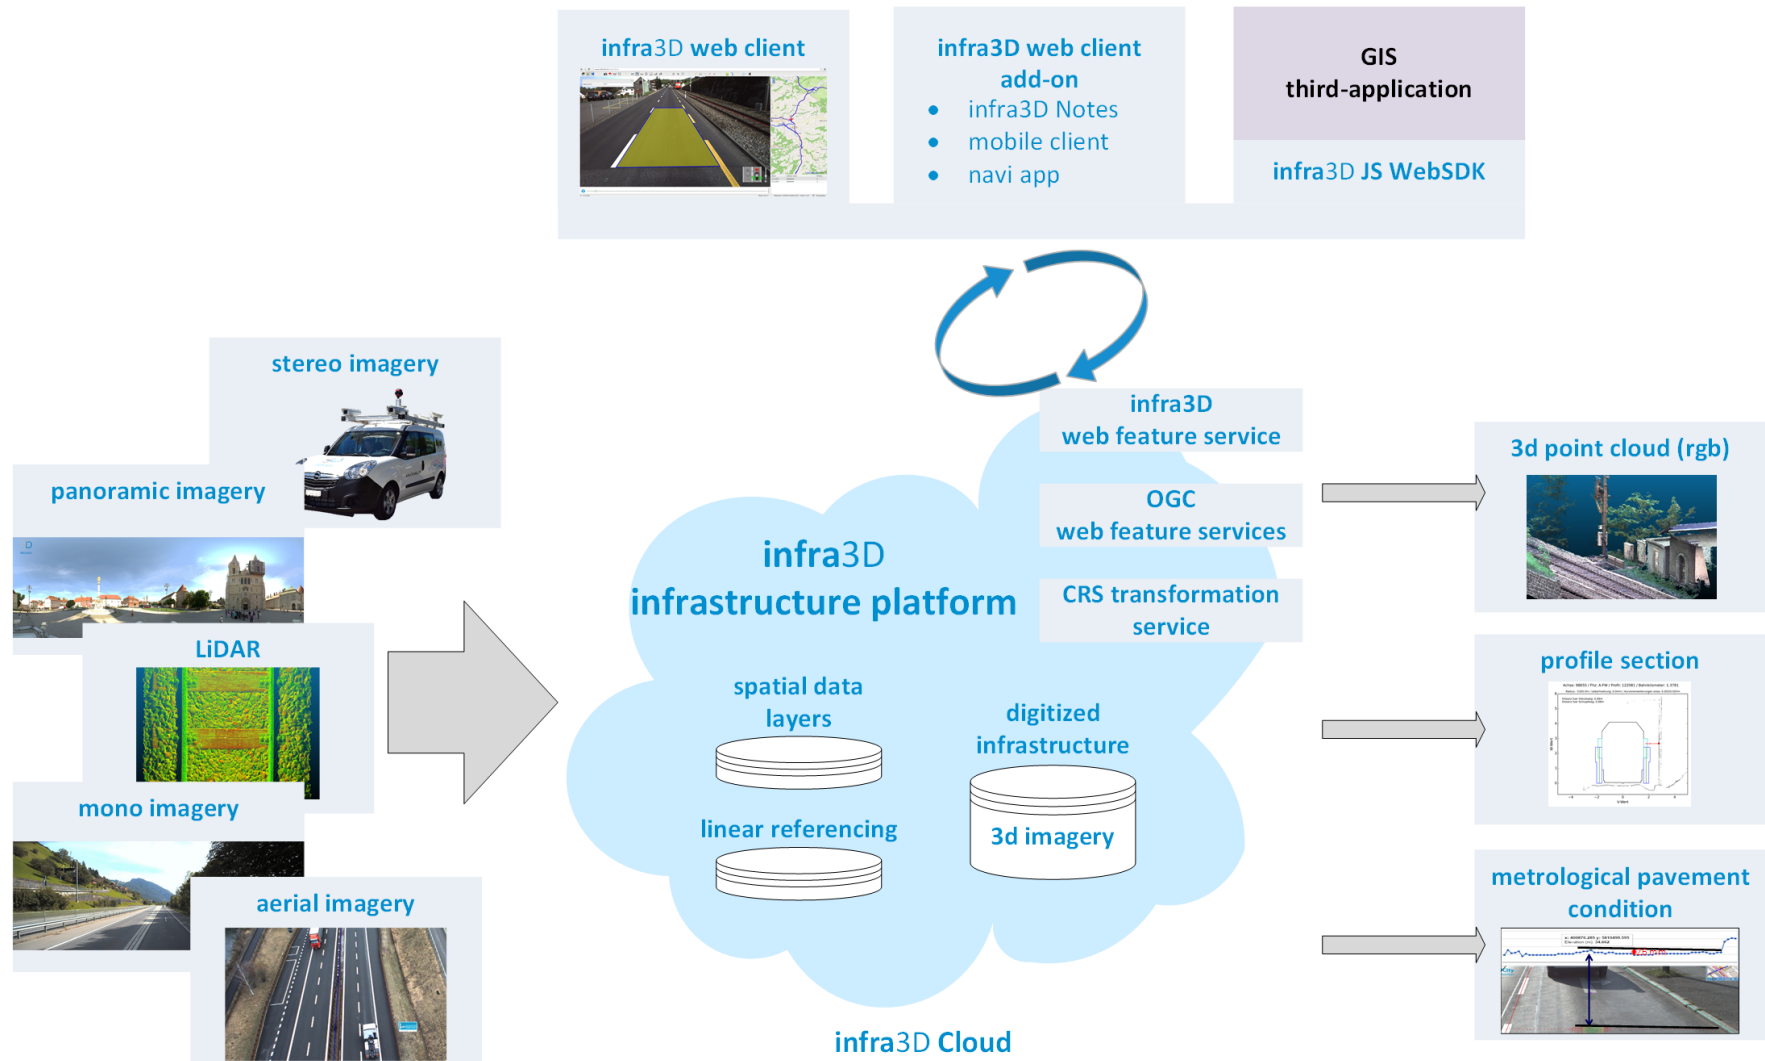

infra3D technology

infra3D infrastructure platform

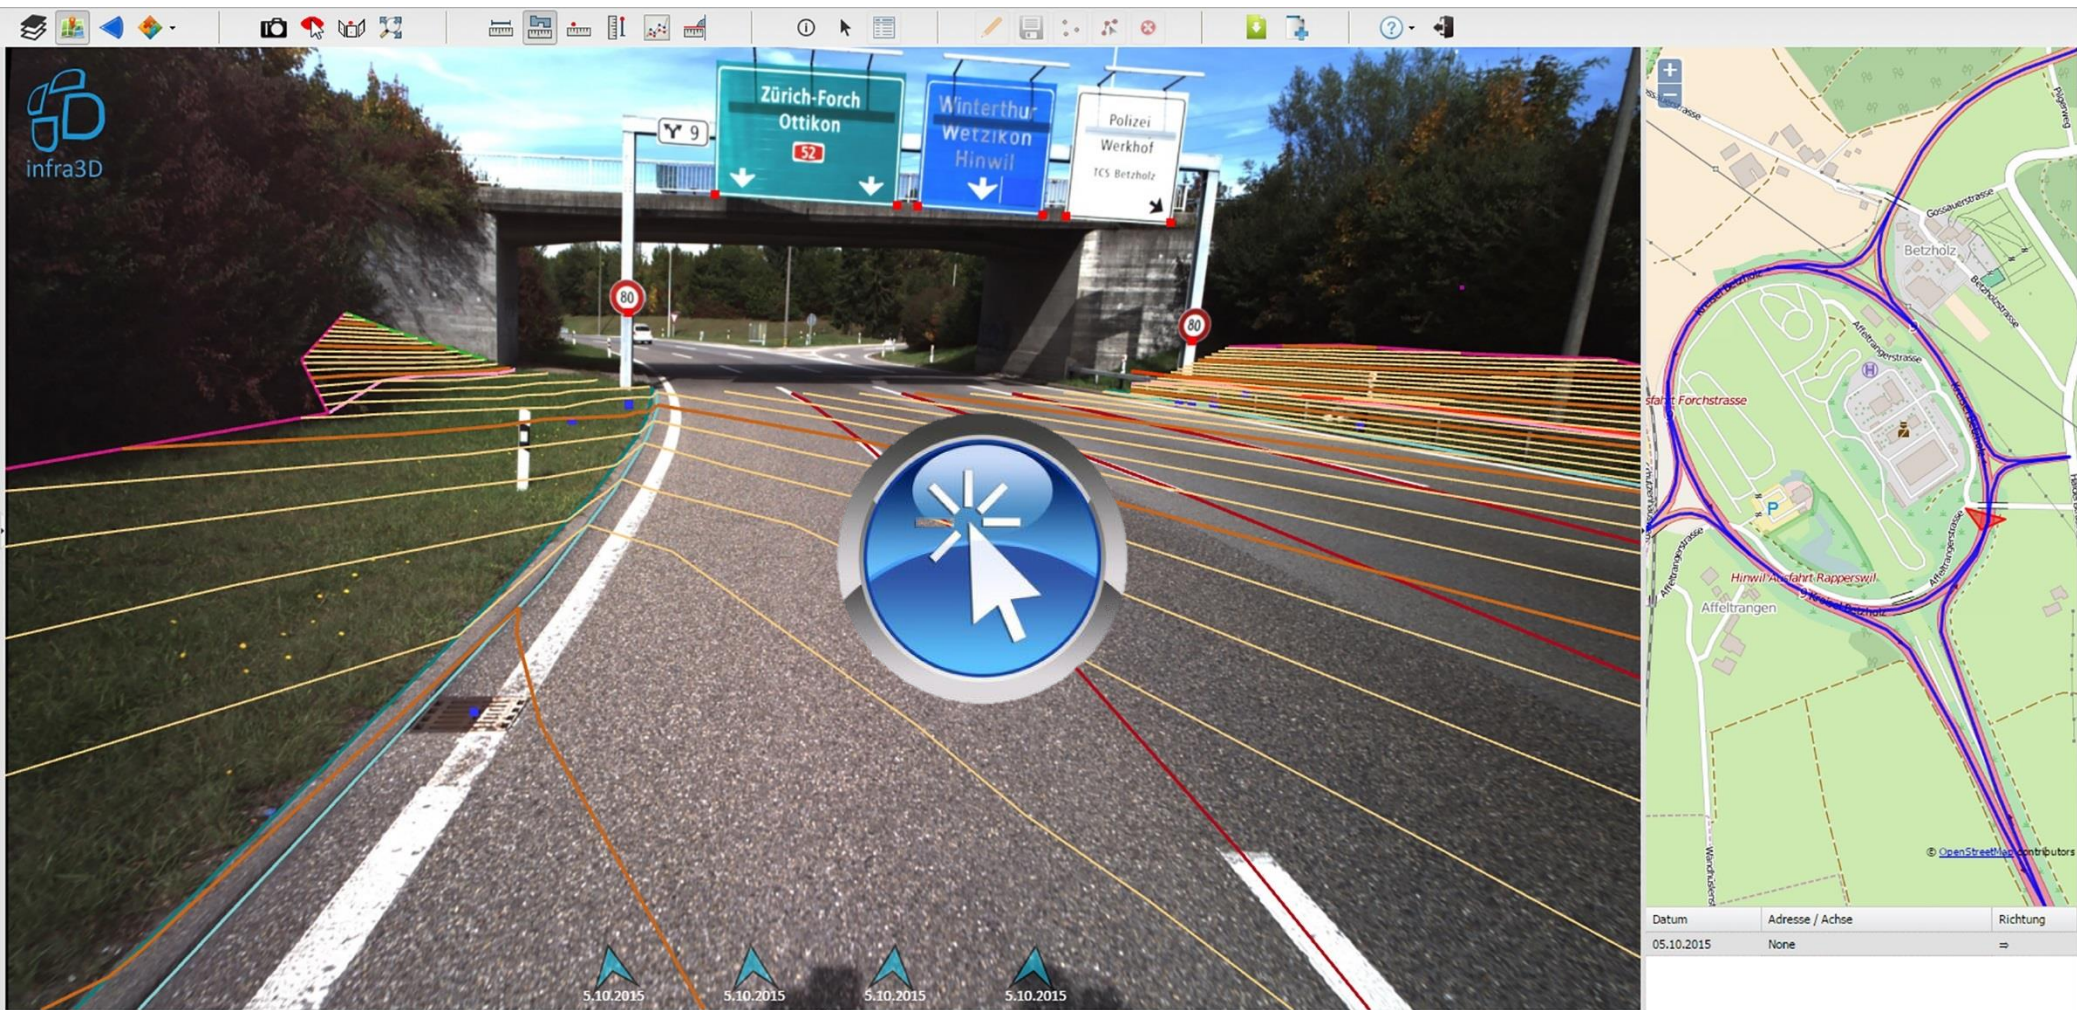

Working with huge amounts of image data

«infra3D streaming technology in the cloud»

infra3D Live Demo

«immerse infrastructure»

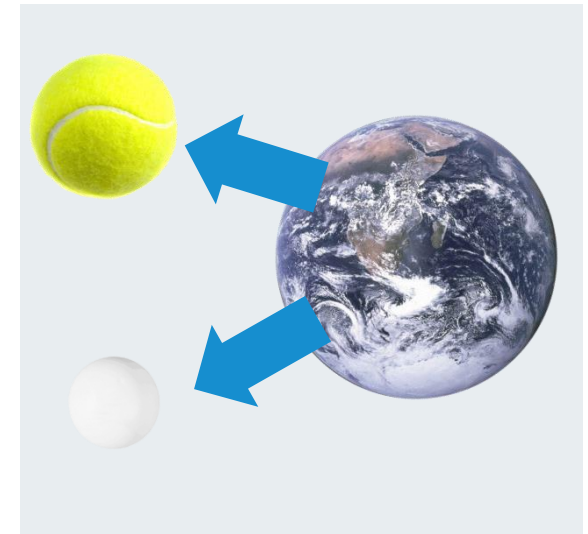

3D measurement accuracy

«absolute and relative»

| Relative | Distance |
|--------------|----------|
| Within frame | < 1 cm |

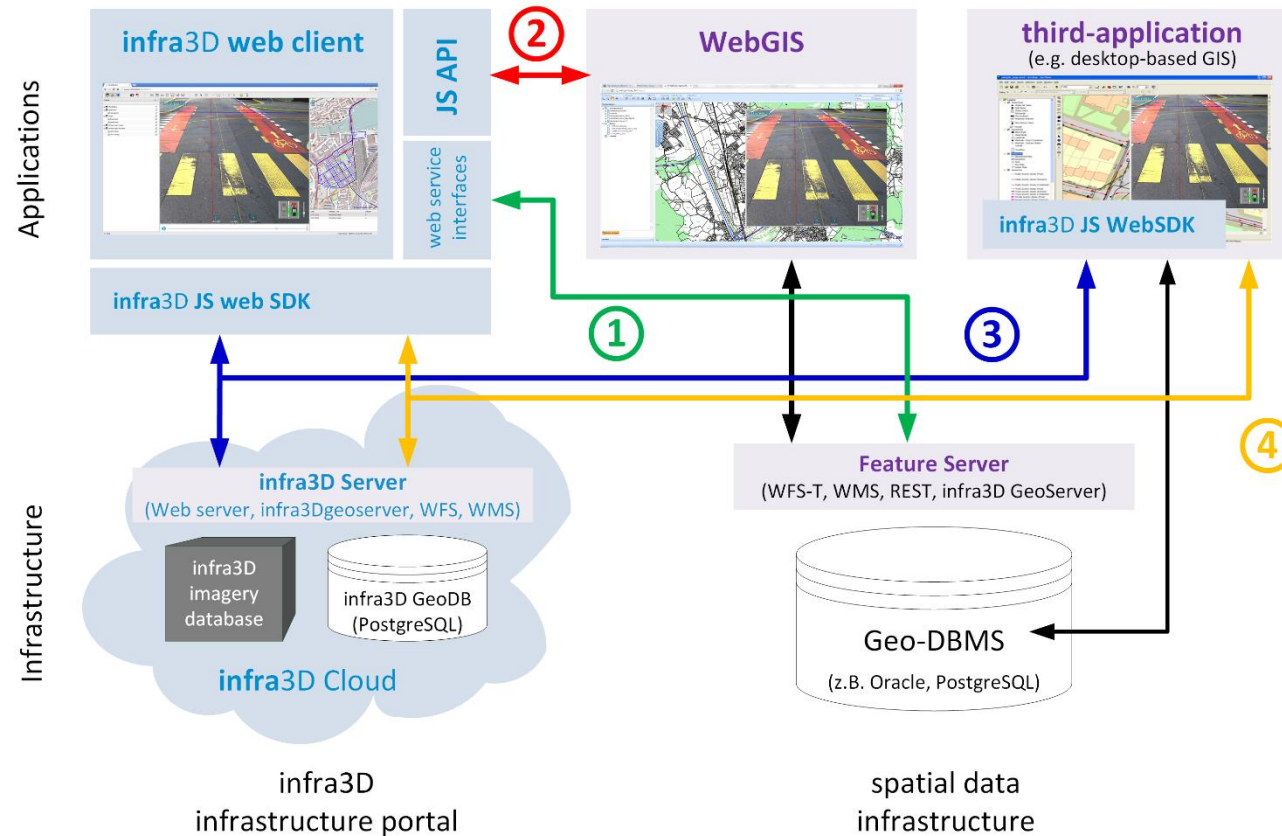

| Absolut | Position | Height | 3D |
|-------------------------|-----------|-----------|------|
| Standard georeferencing | 3 – 20 cm | 2 – 10 cm | |
| Advanced georeferencing | 1 – 2 cm | < 1 cm | 2 cm |

Standard georeferencing: depending on the current GNSS signal coverage

Advanced georeferencing: use of visible control points in the images

infra3D platform interfaces

1. Connection spatial database to infra3D
2. Interaction of infra3D and WebGIS with infra3D API
3. Extensive integration of infra3D in third-application
4. Provision of spatial data through WMS and WFS-T

Examples

infra3DGeoServer

Visualization of spatial data from the infra3D infrastructure platform

ArcGIS REST Feature Server

Visualization of spatial data from an ArcGIS REST Feature Server

WFS-T Server

Visualization of spatial data from the customers spatial data infrastructure

Web service with graphics

Visualization of graphics and icons from a web service

Integrate infra3D with API and SDK

Synergis WebOffice

Navigation and interaction with the
infra3D API

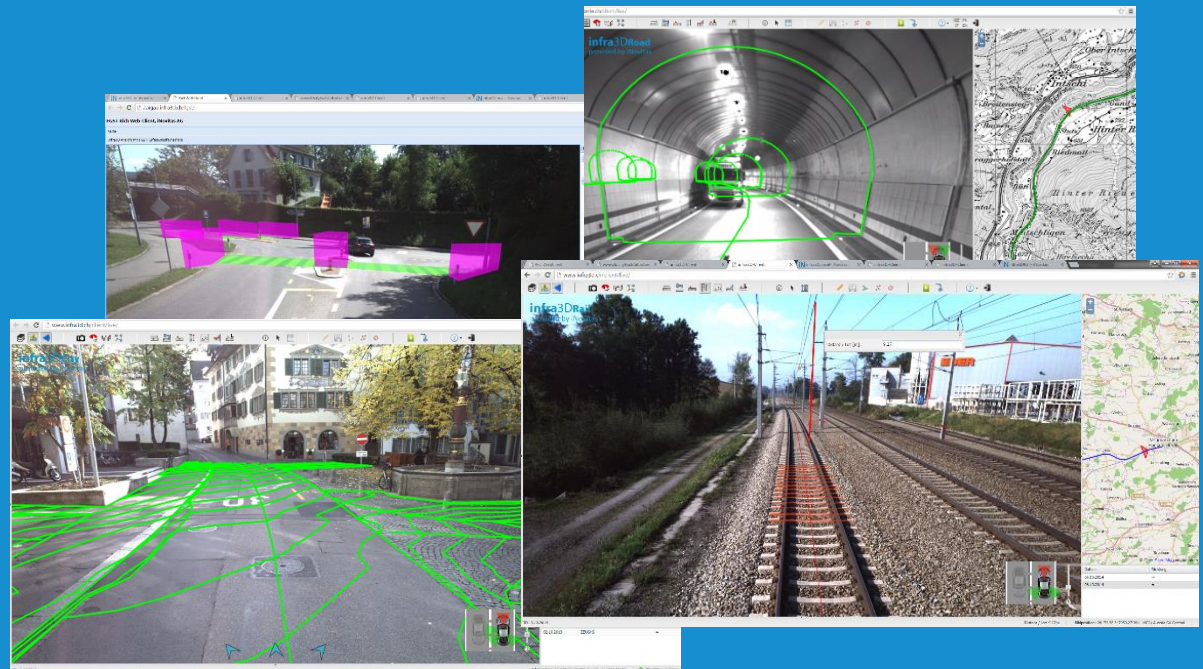

geoProRegio Map+

Navigation and interaction with the
infra3D API

Integration infra3D Service in Bentley MicroStation

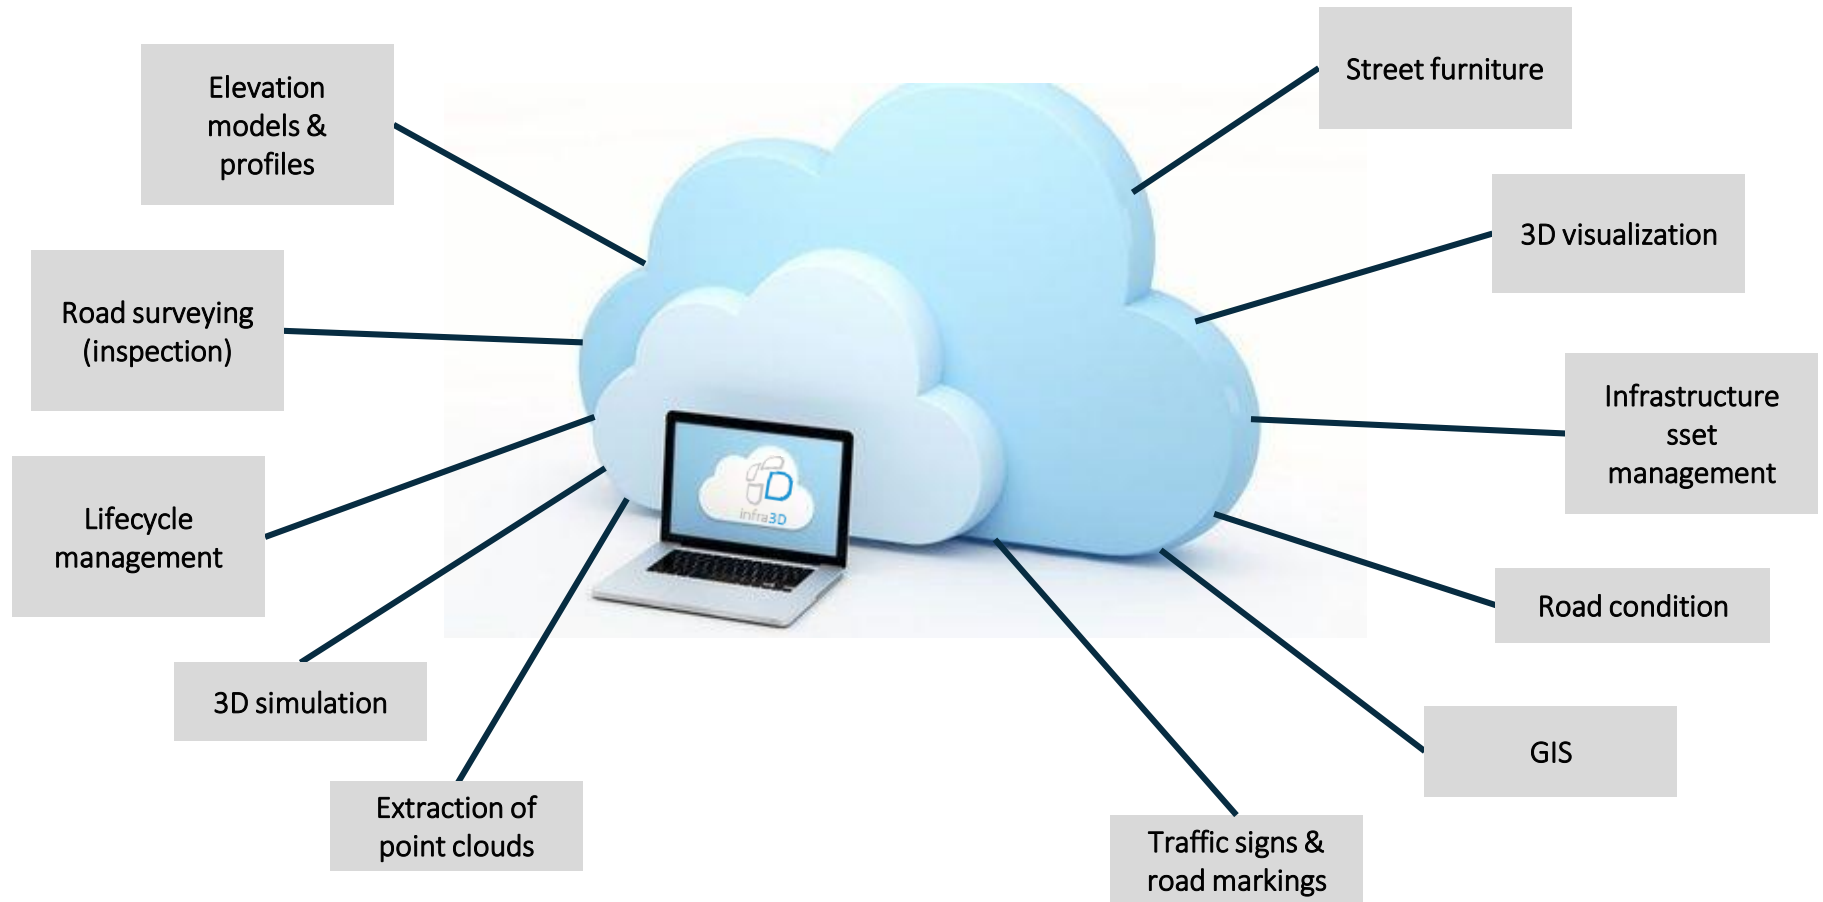

Deep interaction with the infra3D SDK

Applications

Applications

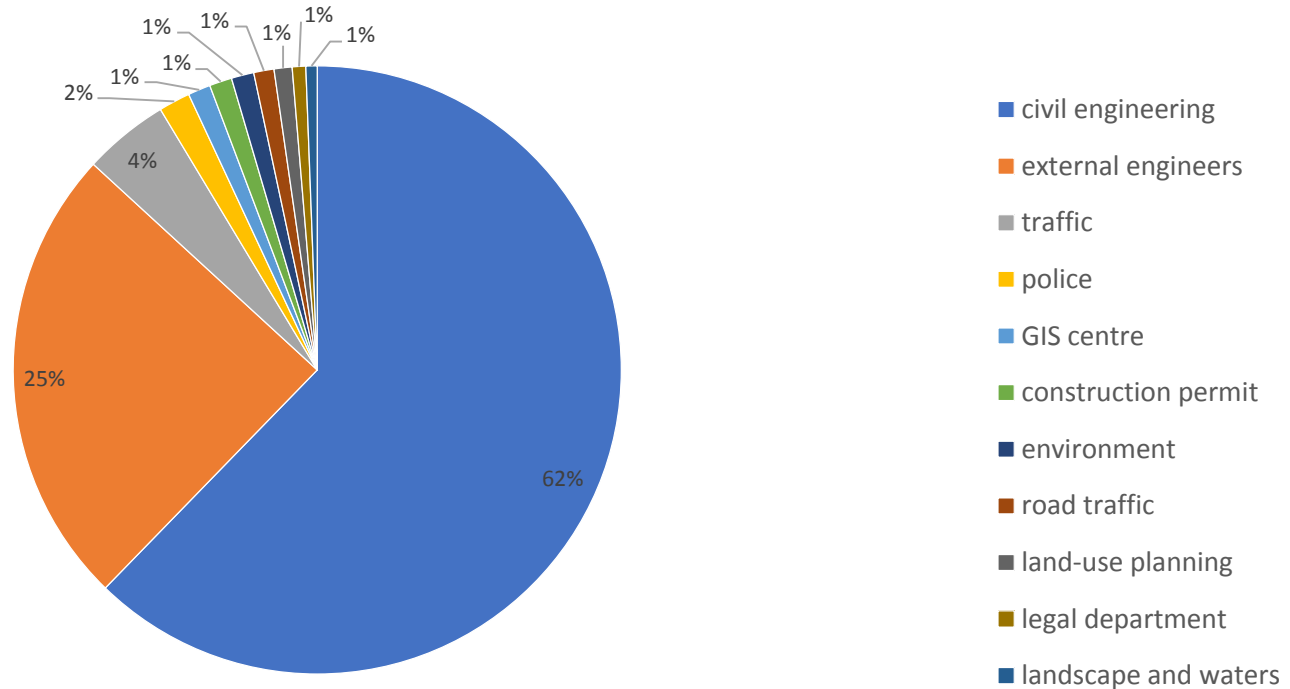

«single acquisition – multiple use»

Virtual site inspection

«e.g. canton of Argovia»

Monthly average utilisation

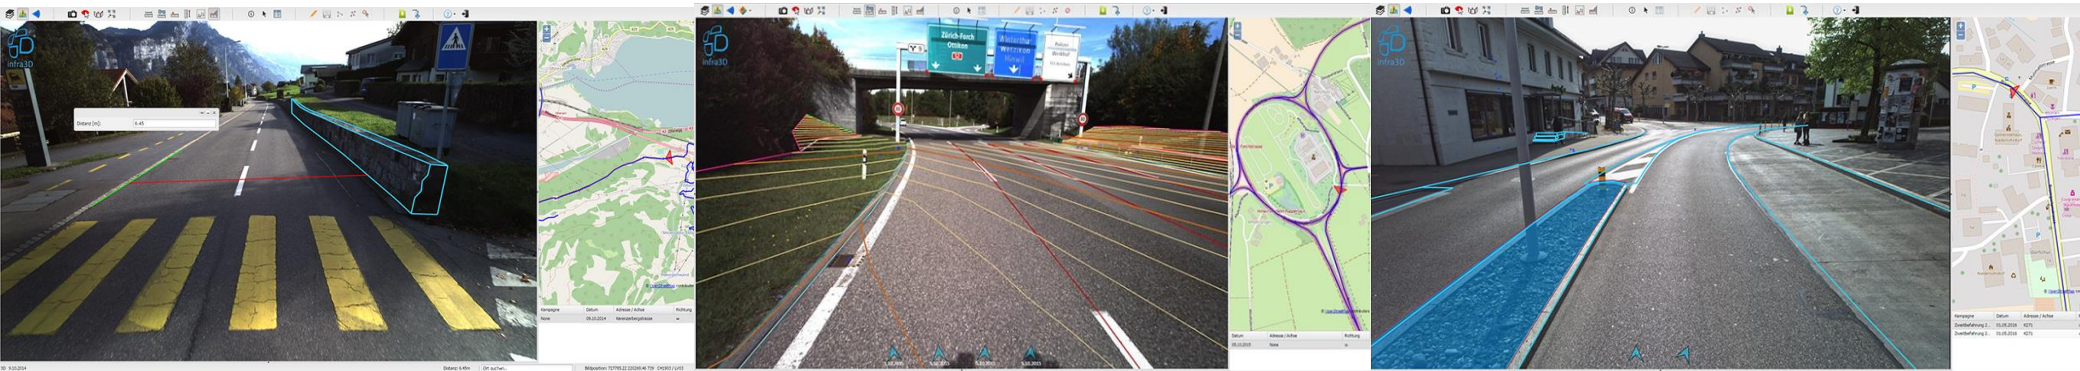

Conclusion

- 835 login per month (41 login per working day)
- Wide use in different departements
- Trend of use is increasing

Planning of infrastructure projects

«the most efficient way of surveying»

Advantages:

- Digitized infrastructure for planning accessible anywhere and anytime
- Efficient measurement tools
- Minimized traffic disturbance and occupational safety
- Flexibility for changes during project
- Multiple use of different stakeholders

Project Oberlandautobahn:

Contact person:

Lukas Rüdin, Basler & Hofmann AG

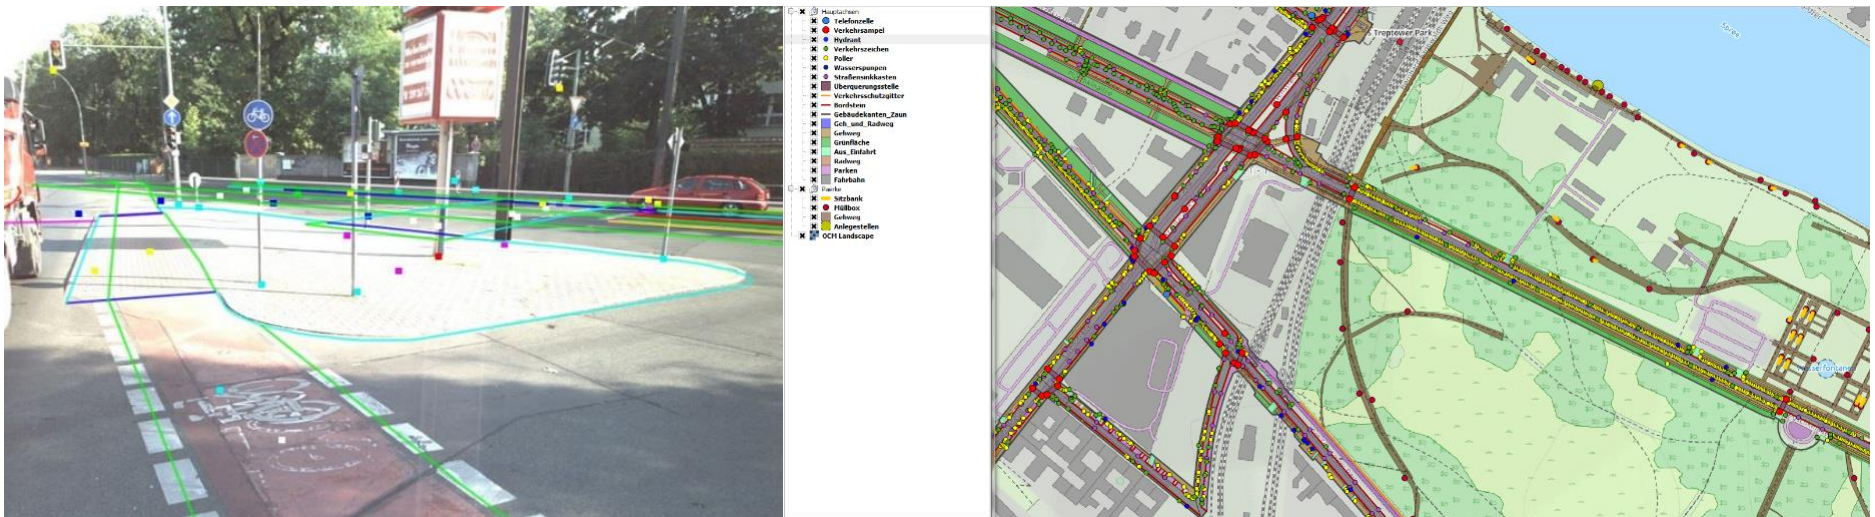

→ Digital elevation model, site inspection, inventory, road profile, visualisation of project data

Mapping & inventory

«smart management of all infrastructure assets»

Advantages:

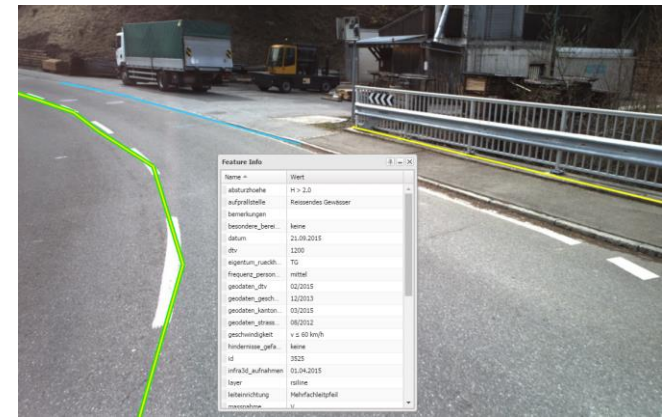

- Easy and fast inventory and map updating
- Direct data management of a asset management system
- Massive reduction of surveying labours → saving time and costs
- Image documentation of all infrastructure assets
- Occupational safety and minimal traffic disturbance

→ Extraction of a comprehensive object catalogue with 80 different object types (City of Berlin)

Road safety inspection

«situation analysis and action planning»

Advantages:

- Easy and efficient weak point analysis
- Consistent hazard assessment
- Immediate planning of actions
- Simple measurement tools for investigation of specification
- Occupational safety

→ Analysis of zebra crossings (Argovia), road safety provisions (Thurgau)

Analysis of pavement condition

«e.g. Swiss standard specification SN 640 925b»

- Asphalt pavement distress (visual)
 - 22 types of distress
(Cracks, Pot Holes, etc.)
 - Degree and extent of damage
 - I0: Pavement distress
 - I1: Pavement distress combined with rut depth
- I2: Longitudinal evenness (metrological)
- I3: Transverse evenness (metrological)
- I4: Grip
- I5: Bearing ratio

Analysis of pavement condition

«e.g. Swiss standard specification SN 640 925b»

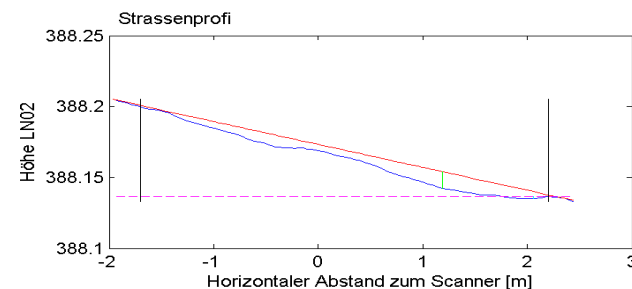

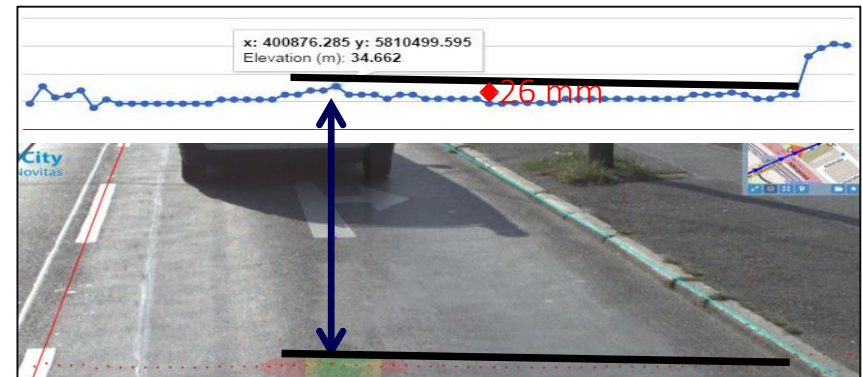

Asphalt pavement distress (visual), $I_{0/1}$

- High resolution front cameras (11 MPix)
- Analysis of ruts with online transverse profile tool

Metrological analysis of pavement

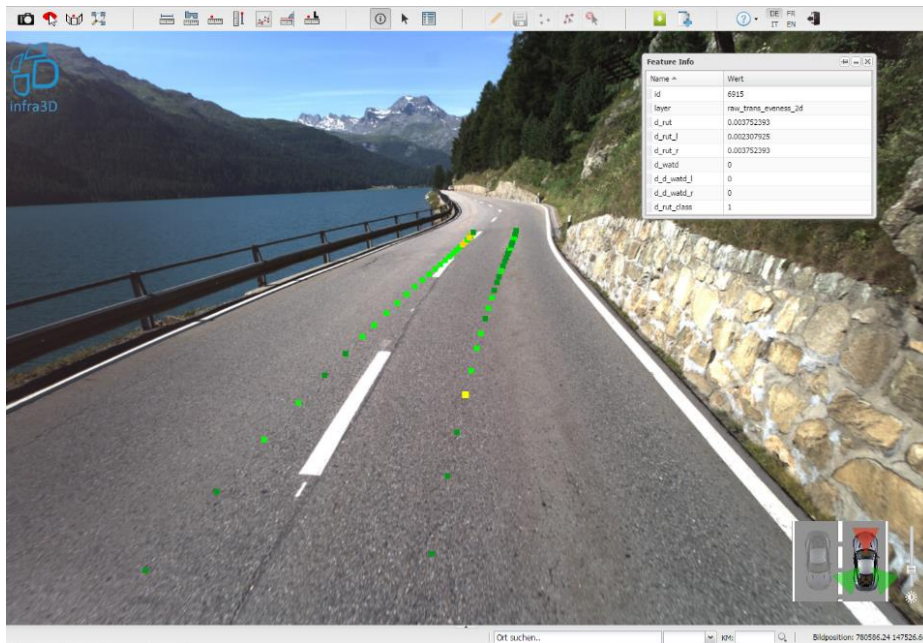

- Basic data from 3D imagery and LiDAR
- Transverse evenness, I_3
- Longitudinal evenness, I_2

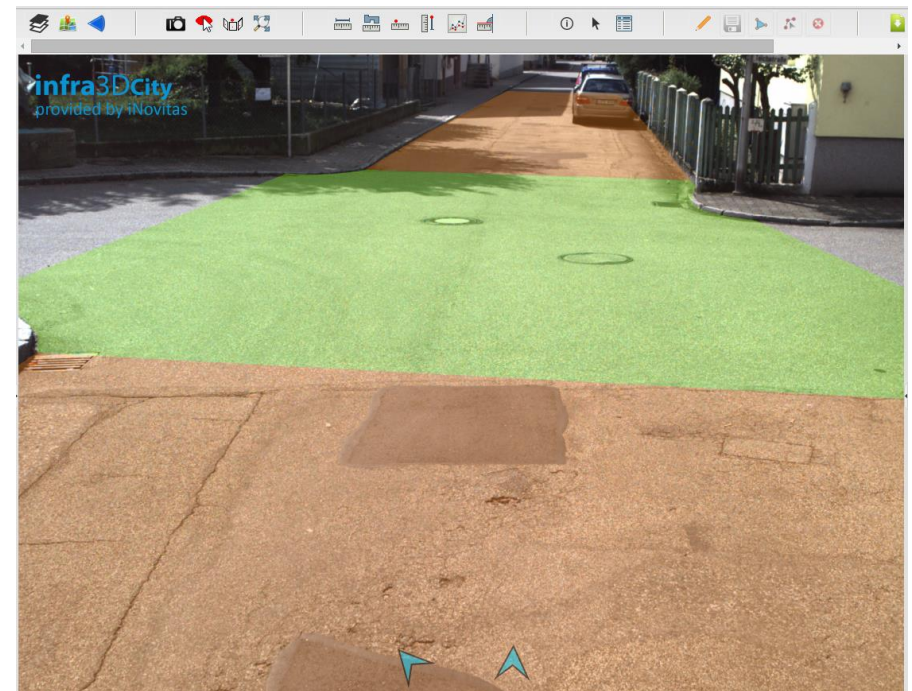

XKoord Nullpunkt:
661683.679
YKoord Nullpunkt:
255790.329
T-Wert [m]:
0.0119278
t-Wert [m]:
0.0015224

Analysis of pavement condition

«results»

Results of the metrological analysis: transverse evenness with rut depth and water depth

Results of the visual analysis: pavement condition index visualized as layer in the web client

Picture documentary of situation

«Full road history»

Management of different times

- Old imagery is always available in the web client
- Comparison of different times
- Documentation of construction site progress

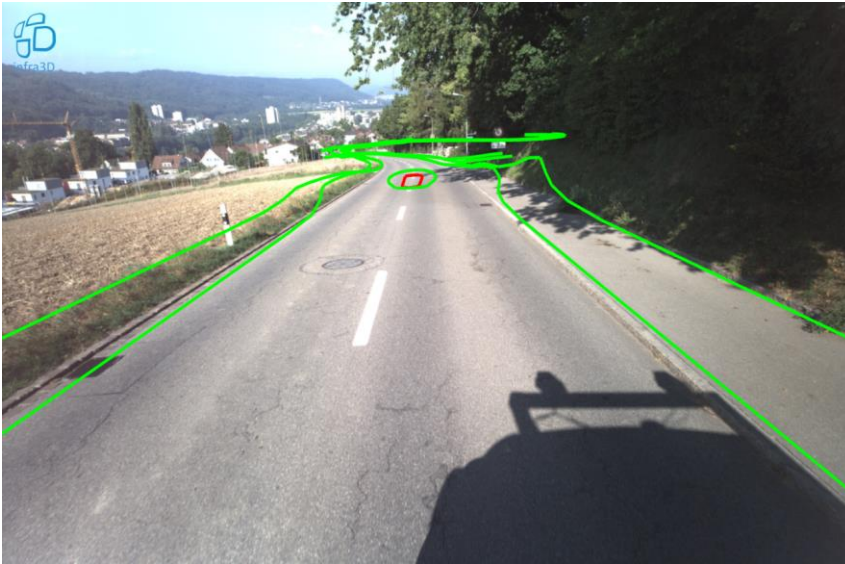

→ Analysis of changes, documentary evidence, ect.

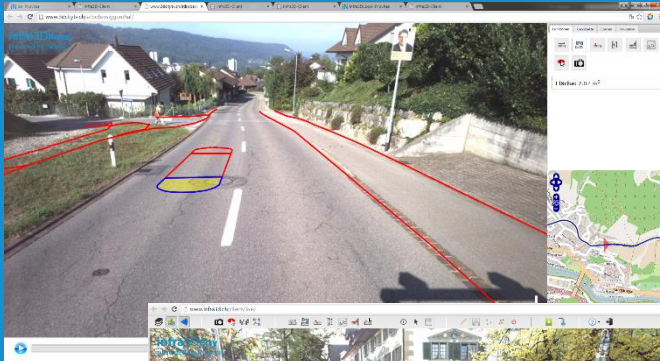

Communication in a project

«people think in images»

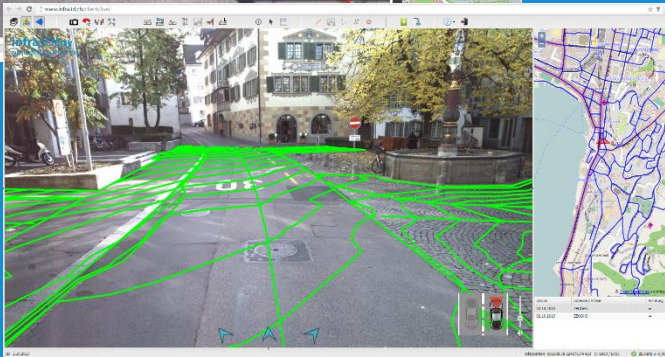

- Easy presentation of projects
- Virtual project space for sharing documents and results

It was never easier...

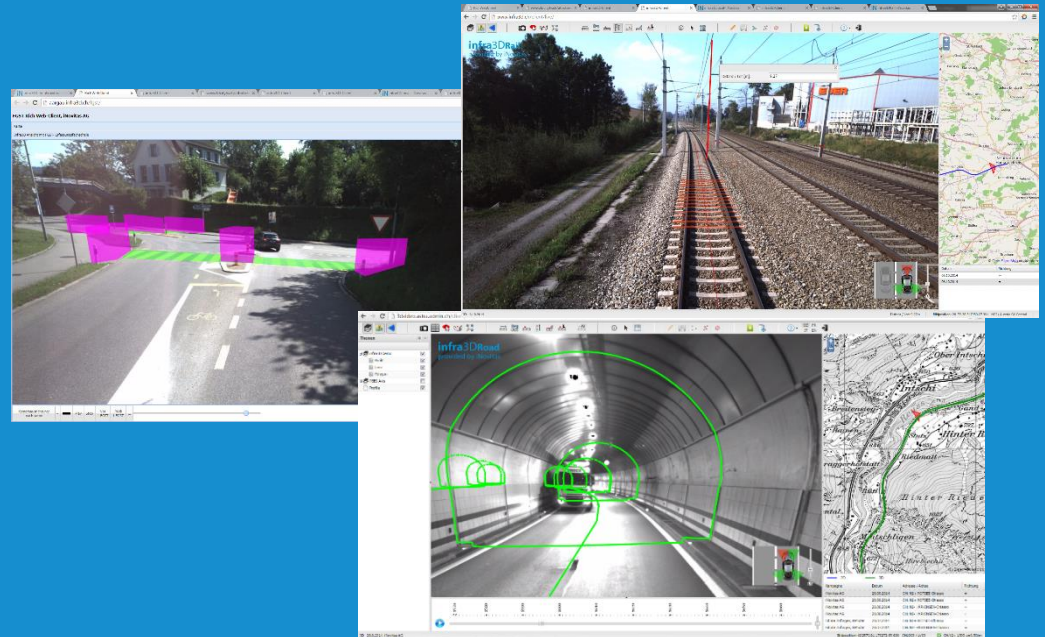

... to communicate
... to understand
... to work
... to document
... to initialize a project

It was never faster...

- ... to get basics
- ... to initialize a project
- ... to review
- ... to digitalize your city
- ... to map

infra3D – immerse infrastructure

Thank you for your attention
